

# Fire Rated Power/Switch Boxes

## INTUMEX "L" INTUMESCENT

Power/Switch boxes contain the intumescent material Intumex "L", which is activated by heat, preventing the spread of fire and smoke.

### Application

Used for fire rating of conventional power/switch boxes. When activated by heat, the Intumex "L" expands preventing the spread of fire and smoke.

### Installation

Cut four (4) strips of Intumex "L" to size and place in the base of a standard size metal power/switch box.

### Fire Test Data

The Pyropanel® system of fire rating electrical power switch boxes is fully tested and approved in accordance to AS 1530, Part 4, 1997 and can achieve a fire resistant rating of up to two (2) hours depending on the construction element it is installed in.
