### BUILDING IN DETAILS

Typical masonry floor application. For slab thicknesses less than 140mm, collar can be adjusted so that top of collar is level with top of slab (B). For thicknesses greater than 140mm, collar must be fully embedded in slab (A).

Typical masonry wall application. For wall thicknesses from 90mm to 150mm, a single GV can be used. For wall thicknesses greater than 150mm, a collar must be used on each side of the wall (trim collar length to suit if required).

Typical plaster wall application. A steel tube must be inserted to within 5 mm of each face of the wall. For wall thicknesses from 90mm to 100, a single GV can be used. For wall thicknesses greater than 100mm (120mm for GV150), a collar must be used on each side of the wall (trim collar length to suit if required). Where double studs are not connected or braced, collars must be located within 300mm of top, bottom, or edge of wall.
